

- **Technology used:** Angular JS, HTML5, jQuery, Bootstrap, REST
- **Roles and Responsibilities:** Led the team from front
  - o Participate in regular conference calls with onsite and customer team, elicit requirements from them, provide daily progress updates and discuss blockers, design approaches
  - o Participate in the full life cycle of development from requirement analysis, specification and design through implementation, testing, deployment, maintenance and support
  - o Perform proof of concepts for checking task feasibility and early customer feedback
  - o Implemented 'World Heat Map' using JavaScript, showing each country issue with their issue priority.
  - o Implemented zoom functionality to the world map so that user can zoom to specific country and if select country only country map highlighted.
  - o Integrated 'Heat Map' with SharePoint list so that every time a country priority changes it reflects on map on real time using REST.
- **Usage Stats(Web based application)**
  - **Environment:** SharePoint on premise, SQL Server 2015
  - **Technology used:** HTML5, jQuery, Bootstrap, REST
  - **Roles and Responsibilities:** Estimation, design and development of various modules.
    - o Bug fixing and maintenance of the product
    - o Coordinated with other teams working on the same project
    - o Implemented various charts, custom pop up, and drill downs
- **Seller Workbench (Windows 8.1 desktop app)**
  - **Environment:** SharePoint on premise, SQL Server 2015
  - **Technology used:** C#, JavaScript, HTML5, SSIS, SSAS, T-SQL
  - **Roles and Responsibilities :**
    - o Analyzed the requirements and developed the assigned modules and unit testing.
    - o Implemented different types of charts to show sales statistics
    - o Designed and created SSIS packages to extract, transform and load data from upstream source.
- **Event Tracing (JavaScript plugin)**
  - **Environment:** IIS, SQL Server 2014
  - **Technology used :** C#, JavaScript, T-SQL
  - **Roles and Responsibilities:**
    - o Implemented generic client side so that every project only need to add reference of code snippet
    - o Reduced server load by writing function to record events in local file and send to server periodically.
